1. Fixed and added features after demo

- The game gains points through specific geometry threshold

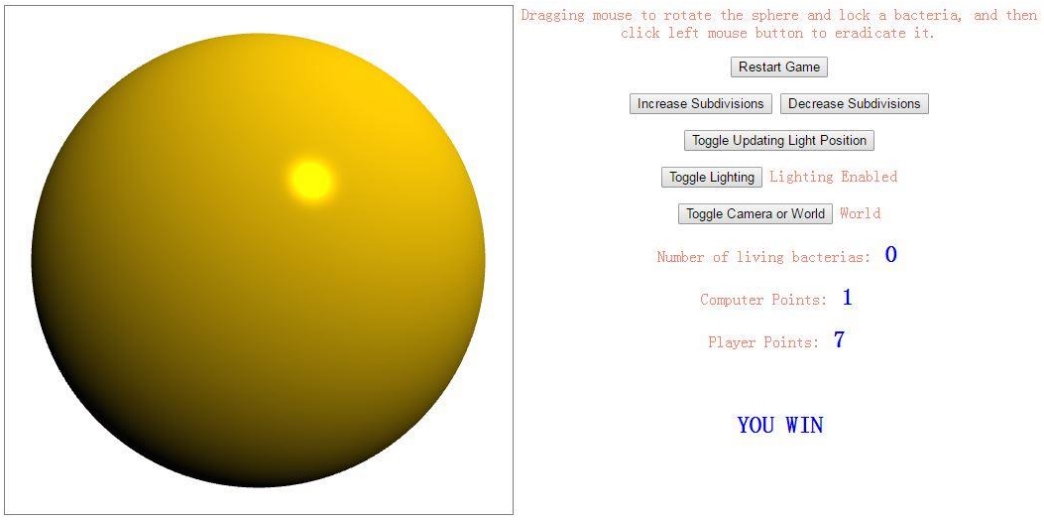

(Bacteria keeps growing before reaching specific geometry threshold)

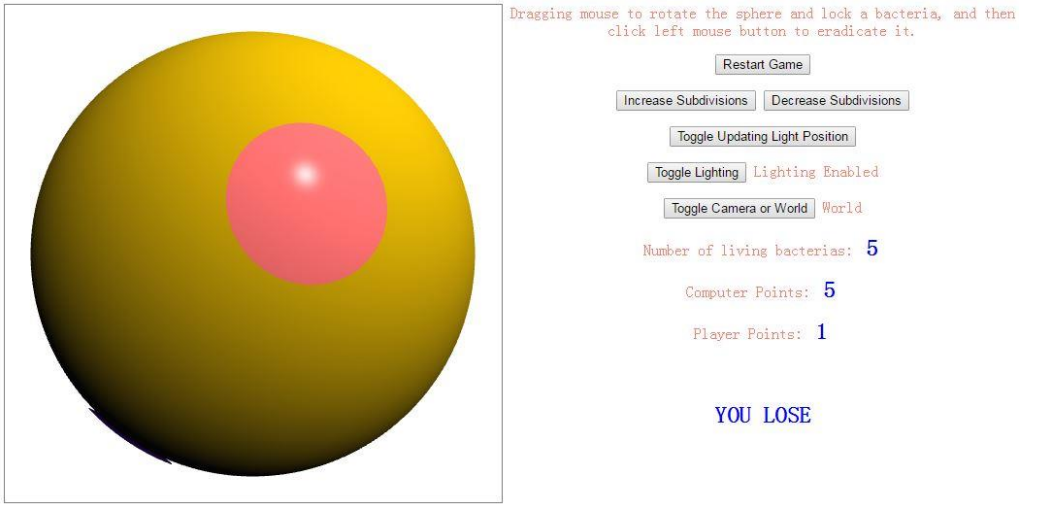

("Computer Points" gains one more point after bacteria growing to geometry threshold)

- The player wins if all bacteria are poisoned before game gets winning points

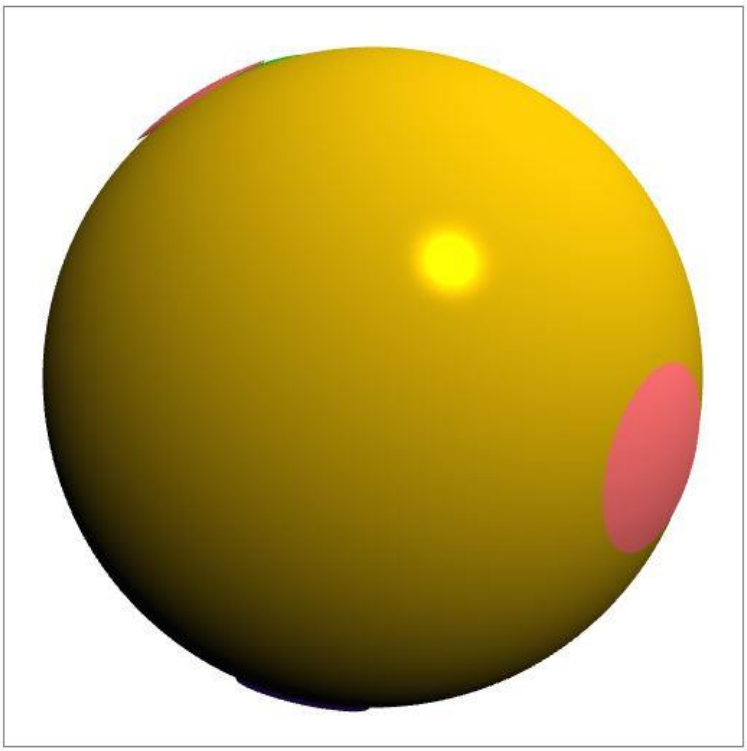

(The player will win the game if all bacteria are poisoned before “Computer Points” reaches five.)

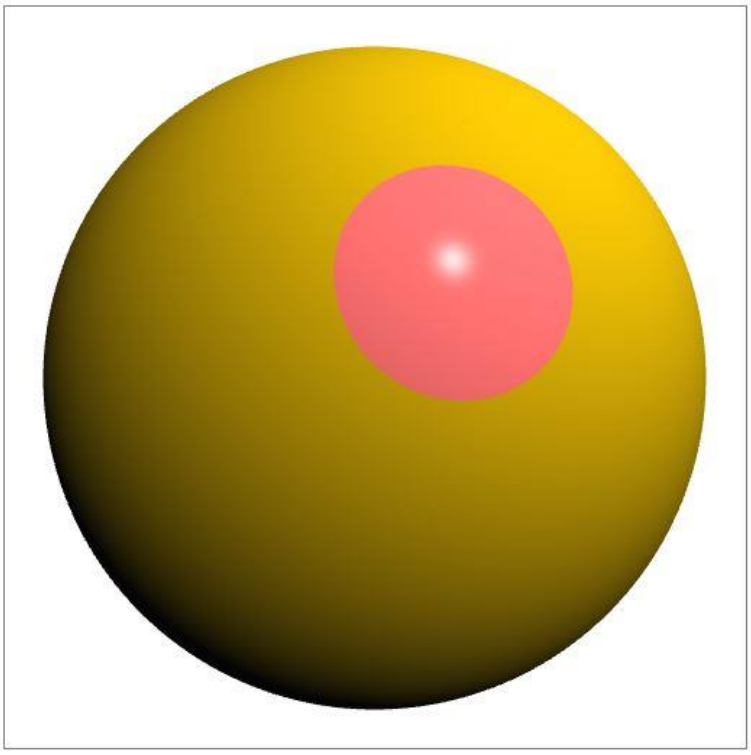

(The player will lose the game if “Computer Points” reaches five before all bacteria are poisoned.)

- Lighting is used

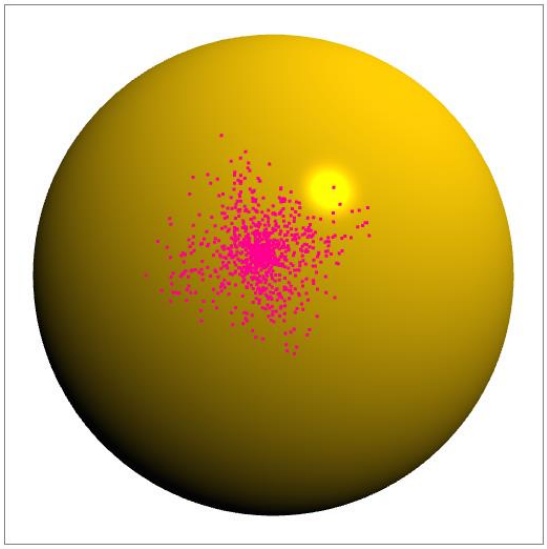

(Lighting shows on the surface of sphere.)

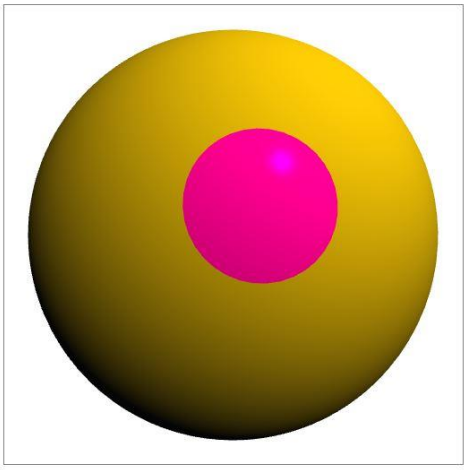

(Lighting shows on the bacteria.)

2. The rest of additional features showed on demo

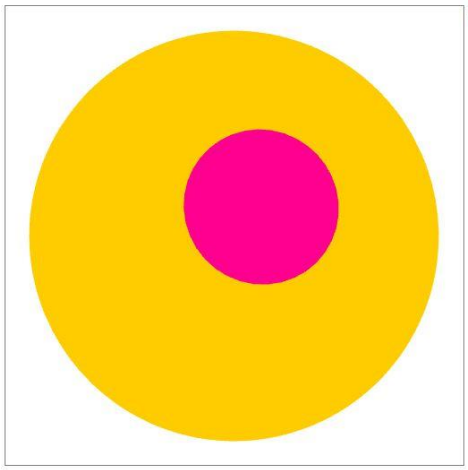

- Using several particles all moving differently

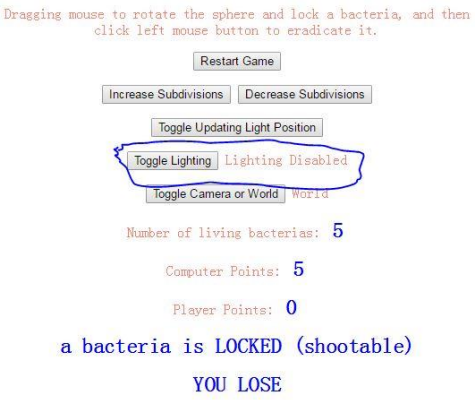

- GUI to enable and disable lighting

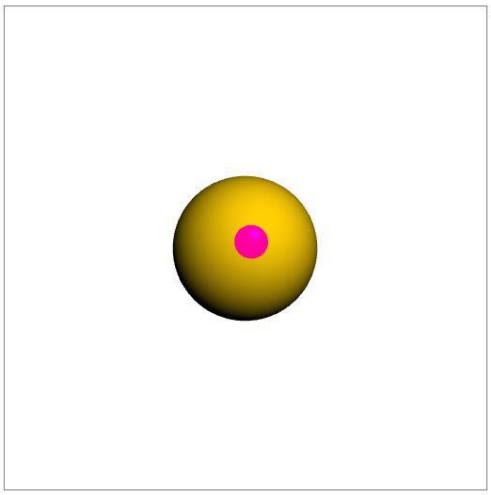

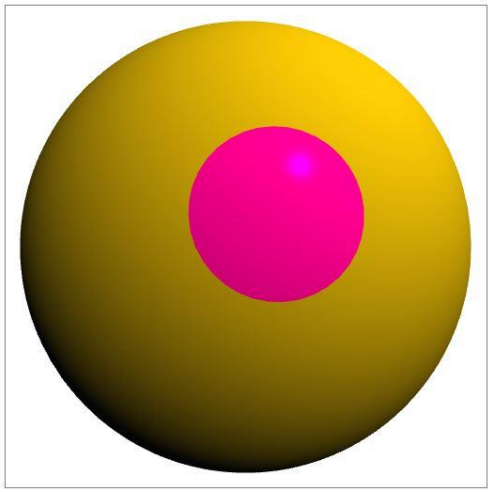

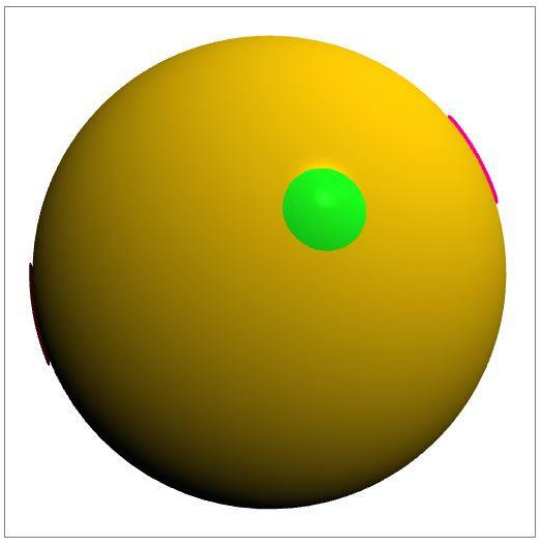

3. The rest of basic features showed on demo

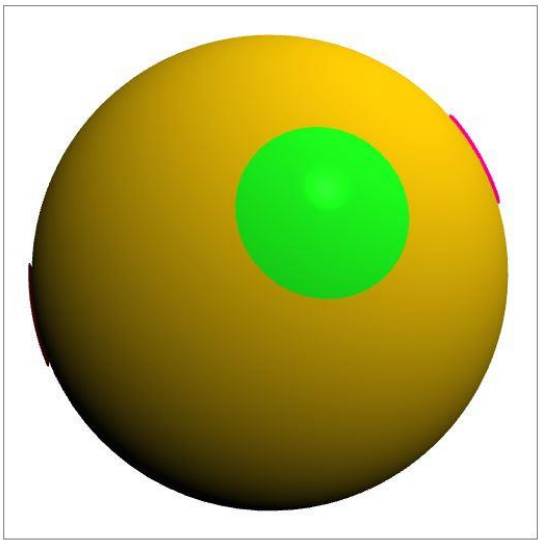

- Surface of a sphere & centered at the origin
- View sphere from outside the sphere & (under interactive control)

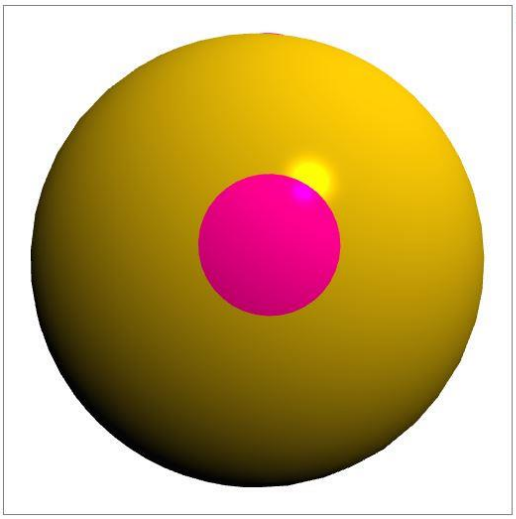

- Grow on the surface & starting at arbitrary spot on the surface & and growing out uniformly in all directions from start

- To poison, player places the mouse over the bacteria and hits a button
- The effect of the poison administered immediately removes bacteria

Dragging mouse to rotate the sphere and lock a bacteria, and then click left mouse button to eradicate it.
